**Dex**  **ADRIANA**

---

Freight Vessle: Adriana; Vof Adriana, Rotterdam

Main engine: Stork type RO 158

Year built: 1965

"In November 2019, a major repair of our reverse gear took place. For the 2nd time, the main gear had become detached from the outgoing axle. This has been successfully repaired by overhaul/engineering company W de Hair bv. All had a great deal of interest for this failure to not happen again, otherwise overhauling the main engine would also be called into question.

By applying DEX DP2 ISO VG100, the temperature of the gearbox has been significantly reduced. The shifting is also slower and therefore quieter. Furthermore, the tooth hammering at low revs is hardly audible anymore. Of course, after a few hundred hours we can't say everything, but also discoloration due to wear of the clutch plates is no longer noticeable. I will be getting back to you on the main engine that is now equipped with DEX DP1 10W40, but for now that also looks very good. Thanks to the use of DEX Oil, we hope to enjoy this engine and clutch for a long time to come." - G. van de Berg (Captain / owner MS Adriana).
